 Delivered by Carrier, \$1.25 per Month.

### \$10 REWARD

A reward of \$10 will be paid for information that will lead to the arrest and conviction of parties stealing The Bonanza from subscribers.

The Associated Press is exclusively entitled to the use for republication of all news credited to it or not otherwise credited in this paper and also the local news published herein. All rights of republication of special dispatches herein are also reserved.

The Bonanza is kept on file at Dempsey & Stanley, Turk and Mason Streets, San Francisco.

Entered at the postoffice in Tonopah as second class matter.

## WHAT WILL END THE WAR.

THE war will not be won by bi-planes, although they will come in mighty handy afterwards for the transportation of United States mail over star routes. Nor will the big guns decide the conflict, nor yet preponderance of man power, wealth, munitions and supplies. The war will be lost, not won. In other words, Germany will, before many months, experience such a reign of discontent and malcontent that the morale of both army and navy will be lost and the surrender will be without quarter. The Bonanza does not set itself up as a prophet, nor the seventh son of the seventh son of a prophet, but simply interprets the signs of the times as they are so plainly written. Germany is fighting a hopeless war and finally the gunfodder at the front is beginning to realize it.

## LOOK BEFORE YOU LEAP.

AS TO the Southern Pacific company and the lands that it proposes to sell to the public, let there be a little diffidence as to accepting prospectuses as Holy Writ until the company has demonstrated possibility of cultivation by sinking wells on these alternate sections which were presented as a bonus to the company by the federal government. No wells have been drilled, so far as The Bonanza can ascertain, in either Humboldt or Elko county, where a large acreage will soon be offered for sale. It is not polite for land agents to entice prospective purchasers to journey long distances to inspect land and find that it is not tillable, particularly if the land agent makes the intending purchaser pay for the auto.

There are hundreds of thousands of acres of government land in Nevada, procurable for \$1.25 an acre, that might be either dry farmed or irrigated from subterranean flows, and that are equally as fertile as the land the Southern Pacific company proposes to sell for \$4 an acre and up. Fight shy of the Southern Pacific lands until the company bores wells and demonstrates the practicability of cultivation.

## WHY MANHATTAN WILL WIN OUT.

WHEN people purchase mining stocks they are actuated by one of two motives. They either seek permanent investment or they desire to speculate. Note the few transactions in the gilt edged Tonopah securities. That is because it requires two to make a bargain. A man may desire to purchase at the market, but he finds it difficult to shake the stock loose from its holder, as the latter, who has familiarized himself with the physical conditions of the property and has studied world finance until he is convinced that silver will be remonetized, is content to leave the certificate in safe deposit or nail it to the bottom of his trunk, and is willing to cash his dividend checks and let the market go to heck, no matter whether bulls or bears are in the ascendancy.

With a new camp it is different, and for the purpose of this argument, Manhattan is a new camp. It has been reborn. In the early boom times it was but superficially prospected, and now deep mining is the order of the day. All the shafts that have lately attained depth are exposing large ore measures, notably the White Caps, Union Amalgamated, Mustang and Manhattan Consolidated. Other workings are approaching the sulphide zone. It is the tremendous possibilities, rather probabilities, that make Manhattans attractive to the speculative purchaser. The forecast is for the advent of big money into the district. Following the Extension coterie come Whitman Symmes, John H. Miller, and a score of individuals and aggregates of individuals that might be named. The newcomers believe in spending money to make money. Trenching and gopher holing do not appeal to mine makers such as these. Work on large scale, one of the heaviest yet attempted in Nevada, will soon be in progress all over the district. That is why Manhattan will win out.

## MAKING THE INDUSTRY PERMANENT.

A FARM is an area of land from which products of the vegetable kingdom may be outputted for an indefinite period, provided the soil is scientifically cultivated and, in the event of impoverishment, supplied with needed elements. A mine is an acreage containing products of the mineral kingdom, which, when withdrawn, are not replaced, except after centuries of time, as is the case with some of the old silver properties in Mexico, which are being worked again after nature has by her unprecipitate process re-enriched the old fissures.

In order to preserve the mining industry it is therefore necessary to uncover new deposits. This may be done by delving deeper in mines which show diminishing output, by developing contiguous territory or by opening up new districts. It is thus the privilege as well as the duty of mine investors to closely watch developments in entirely new camps or in properties adjoining those that have become exhausted. Manhattan, Tolicha, Jefferson, Tybo and a number of other districts in this county bear testimony to the verity of these suggestions. There is every assurance that the mining industry of Nye county is established on a permanent foundation, owing to the business-like manner in which people are going about to find new orebodies in either old camps that have been revived or new districts that have been discovered.

## CLIPPED AND CREDITED.

Our attitude toward England is very simple. She is fighting on land and sea with her full power, she is fighting effectively, she is fighting our battle, and, by hooky, we are with her heart and soul to the finish.—Houston Post.

Times certainly change. A German commander now offers a reward for an American soldier dead or alive, and only a few

months ago Von Bernstorff was offering \$50,000 if we wouldn't send any.—Chicago Herald.

If "explanation" is all Sweden wants from Germany, she has gone to the world's experts.—Wall Street Journal.

We have, as has been said officially, no quarrel with the German people; but if thirty or forty or more plots are exposed we are ever so likely to have one. This country can be pushed just so far.—New York Tribune.

What did Sweden think was being sent to Berlin in her diplomatic code, the baseball scores?—Boston Transcript.

The city Lull has had and continues to have more exposures on every side than any building in Chicago.—Chicago Herald.

Is it a mere coincidence that the kaiser so heartily approves of the pacifist movement here in America?—Chicago Daily News.

The way in which Von Bernstorff got German money for futile schemes shows there are plenty of easy marks in Germany.—Brooklyn Eagle.

Every productive industry is on the battle line today and every man who quits it without good cause is a military deserter.—Chicago Herald.

The most conspicuous German offensive lately has been the offensive conduct of her foreign diplomatic officials.—Nashville Southern Lumberman.

"Between Germany and the United States there could be only one choice for us."—George Sylvester Viereck. Readers of the V-neck publications do not need two guesses as to what that choice was.—New York Sun.

## Weekly Sporting Events

(By Associated Press.)

SAN FRANCISCO, Cal., Oct. 12.—Sid Cavill, the Australian swimmer, who, with his brothers, originated the crawl stroke now so universally used in speed tests, states that the difficulties of the stroke have been very much exaggerated and a wrong conception given it by a number of writers who have tried to explain it.

As a matter of fact, to its simplicity is due the speed which can be gotten out of it. There is no extra motion, according to Cavill. Much stress, he says, has been placed on the action of the legs and feet, whereas, these take care of themselves. The power and propelling force lies practically entirely in the arms and the motion of the legs is more of a stabilizer than anything else. They keep the body flat along the surface of the water.

One of the principal tricks of the stroke which the learner must master consists in knowing just when to breathe. The position of the body brings the water up to the eyes, the mouth and nose being submerged. A little instruction in regard to this will quickly show the beginner the moments during the stroke when the breath should be exhaled and inhaled.

For the time being, interest in the race of the Pacific Coast Baseball league is entirely overshadowed by the big world's series being played between the New York Nationals and the Chicago Americans. What betting has been done here has been practically on an even basis, although the popular sympathy may perhaps lean slightly on the side of the Windy City players.

Such newspapers as make use of the electric scoreboard are popular meccas during play and the streets are kept from being entirely blocked to traffic only through the activities

of the police.

The sympathies of the crowd may readily be judged by the outward and visible signs they manifest when one side or the other makes a good or a bad play.

Ruth of Salt Lake and Fitzgerald of San Francisco continue to give the Pacific coast public as close a race for batting honors as was ever presented to followers of baseball. For weeks there has been a fluctuating margin of only a few points between them and no one is venturing to predict who will be the ultimate winner.

The rivals are keeping hawk-like watch on each other's daily records in the official box scores. The men are so close together now that the difference between a time at bat and what does not constitute a time at bat may mean a change in their relative positions.

The playing talent of the American gridiron has been transferred from the college campus to the training camp fields and while the various institutions of learning are trying to turn out something from relatively nothing, the soldier and sailor units throughout the country have organized elevens that would worthily represent the best universities in normal times.

"To see football as it should be played, go to the training camp games," has come to be fairly well recognized as being an accurate summing up of the conditions. It is the nearest approach that ever has existed of selections for an "all-American" team actually getting together on a regularly organized team. The football team of a naval unit located near San Francisco has the pick of the Pacific coast teams playing together and they have won all their games, thus far, by overwhelming margins.

## CRACKERJACK MINE IS NEARING AN OREBODY

### CROSSCUT NOW ENTERING VEIN THAT PRODUCED GOOD ASSAYS.

Development work on the Reorganized Cracker Jack company's property is progressing along established lines and the character of the formation now showing in the east crosscut on the main 230-foot level indicates that the drills are about to penetrate the Rabbit Trail vein, for which the crosscut has been extended a considerable distance beyond the main Columbia Mountain fault vein. The work has been progressing in hard andesite, but is now in a greatly fractured zone, showing an increasing degree of silicification, says the Tribune.

From all indications at the surface, the point has been reached where this vein should be cut, and it is said that blasting at the face of the crosscut can now be heard by a person standing at the apex of the vein on the eastern part of the Cracker Jack property. Value of this character will, it is said by miners, carry sound for a long distance and the men employed in the mine are convinced that they are now nearing the vein, in which good ore was found nearer the surface. Drifts and raises will be driven to explore this vein in a thorough manner and from this point the work of development will later be extended into the adjoining ground of the General Washington Development company.

Drifts extended to the south at two points in the great Columbia Mountain fault vein, farther to the west, exposed quantities of low and medium grade ore, carrying gold, silver, copper and zinc. Seams of higher grade material were also found in this work and all indications give promise of finding important deposits with further exploration in this big vein.

## PLANT WILL TREAT ANTIMONY PRODUCT

### PROPERTY NEAR UNIONVILLE TO BE EQUIPPED WITH MILL.

John Rosse, well known mining man, and Homer Wilson, president and general manager of the Pioneer Exploration company, with headquarters in San Francisco, arrived here Wednesday from Unionville, where they are interested in mining enterprises. From plans now being completed, Messrs. Rosse and Wilson, with associates, will develop and mine and mill in the Humboldt range section.

They have acquired the Bloody Canyon antimony property and other valuable deposits of this metal in the section adjacent to Unionville, which will be developed and the ore reduced in a plant which is now being equipped at Mill City.

The Bloody Canyon mines for a number of years have been producing large quantities of high grade antimony ore which was shipped out of the state to a reduction plant.

It is said that there are thousands of tons of antimony ore in the Humboldt range that will pay with their reduction plant in operation.

Mr. Rosse and Mr. Wilson expect to return to Unionville today.—Humboldt Star.

The Bonanza publishes full telegraph reports. Subscribe for it.
